

CEN SuperBeet – 20kg

ZERO MOLASSES

QUICK FEED PELLET

HIGH DIGESTIBLE FIBRE

NON-GMO & ALL NATURAL

Ingredients: Unmolassed Sugar Beet Pulp Pellet (Low Sugar, High Fibre)

The Lower Iron + No Soak Beet Option

Dry Feeding Instructions:

- Ensure adequate water nearby
- Horses that are used to dry/pelleted feed

DO NOT DRY FEED To Horses:

- Who are usually fed a wet/damp feed
- With previous/existing throat conditions
- Who bolt/scoff at their feed
- Older horses with bad teeth

Damp/Wet Feeding Instructions:

- Mix equal parts beet (e.g 500g beet to 500mL water) leave for 5mins before feeding.
- Can be soaked for longer if desired.

DESCRIPTION

CEN SuperBeet is a healthy high fibre feed that provides fantastic digestible energy levels without the starch and sugar from grain.

It is high in digestible fibre which is easily digested by the gut microbiome.

CEN SuperBeet can be incorporated into all diets as a source of digestible fibre and to significantly lower the sugar and starch content, reducing the effect of acidosis related problems.

The low sugar and starch profile, results in a low glycemic index and minimal insulin response, making it a highly suitable feed for all horse types including horses with Cushing's Disease and prone to metabolic

disorders such as Laminitis, IR (Insulin Resistance) or PSSM (Polysaccharide Storage Myopathy).

CEN SuperBeet is an excellent fibre source, where no hay or a limited amount of hay or pasture is fed.

High in digestible fibre to help maintain gut microbiome health

Cool calorie source, especially suitable for fizzy/excitable horses

Encourages intake of less palatable feeds, especially fussy/picky eaters

Highly suitable for horses with metabolic conditions e.g EMS, Laminitis

Feed wet, dry or damp according to individual horse's requirements.

Can be soaked to a mash, a suitable choice for older horses with poor teeth

Ingredients: Unmolassed Sugar Beet Pulp Pellet (Low Sugar, High Fibre)

- **CEN SuperBeet is an unmolassed high fibre beet pulp pellet, which has a prebiotic effect promoting optimum digestive health. See video below for further information on stomach ulcers in horses.**
- Digestible Energy: 12MJ
- Crude Protein: 9%
- Crude Fibre: 18%
- Crude Fat: 1%
- Starch: 1%

FEEDING GUIDE:

The same as your existing beet product as per kg they all have similar digestible energy. Depends on your individual horse.

As a guide –

Per Day Dry Weight

Maintenance feed 200g per 100kg Bodyweight

Increase according to workload or desired condition.

The Lower Iron + No Soak Beet Option
