

The Many Benefits of biologically **activated** nutrition

"**Life-Force® Pasture Boost** has been specifically designed utilising fertilisers that will yield maximum long term fertility to soil, plant & animal. In real terms this means that common fertility problems such as nutrient leaching, erosion, hardpans, aluminium toxicity, key nutrient deficiencies and phosphorus lock up are rectified, as well as the recovery of weed affected soils.

Unlike acid treated phosphorus, the colloidal clay form of phosphorus in "**Life-Force® Pasture Boost** will not lock up.

Sustained release of the required nutrition & the continuing stimulation of appropriate microbes, via paramagnetic activity & humic acid release, ensures pasture growth is vigorous & more importantly, nutrient dense. The quality, or nutrient density of a pasture is the key to producing strong, healthy stock that are capable of superior productivity."

Guy Webb B.Sc REM Agricultural Consultant

**LIFE-FORCE® PASTURE BOOST
WILL NOT LOCK UP**

Life-Force™ Pasture Boost

A quality pasture can only truly be achieved via balanced nutrition & biology found in a healthy soil.

Life-Force® Pasture Boost addresses all the critical fertility factors required to bring life & fertility back to tired soils.

Designed by a long established & successful Australian farming family in conjunction with NTS' Life-Force® Pasture Boost is a high performance product specifically designed for maximum stock health & production & on going soil fertility.
